PROJECT PROGRESS REPORT – 1

OFFICE MANAGEMENT SYSTEM

SMT B.K MEHTA IT CENTRE BCA COLLEGE

Submitted in partial fulfilment of the requirements for the degree of

BCA – Bachelors in Computer Application

Prepared By: Syed Sadiya

Roll No: 171

Exam No: 737

Prepared By: Palray Rajvi Kaur

Roll No: 95

Exam No: 690

Under the Guidance of: Shri S. C. Malav

Date of Submission: April 16, 2026

1. Abstract

The Office Management System is a full-stack web application developed using the MERN Stack, which including MongoDB, Express.js, React.js and Node.js. The system is designed to manage office operations such as employee management, task assignment and attendance tracking. It provides a responsive user interface and efficient backend services, ensuring real-time data handling and improved productivity.

2. Objectives:

- To digitize office operations
- To manage employees efficiently
- To track tasks and attendance
- To reduce paperwork
- To provide reports

3. Project Progress (75%)

The project is approximately 75% completed with major modules implemented.

- UI completed
- Login system working
- Database connected
- Employee module done
- Task module done
- Dashboard ready

4. Database: Mongo DB

Collections:

4.1 Users Collection

Field Name	Type	Description
name	String	Stores user full name
email	String	Unique email for login
id	String	Employee ID
department	String	Department of employee
phoneno	String	Contact number
address	String	Residential address
password	String	Encrypted user password
role	String	Defines user role (admin/user)
createdAt	Date	Auto-generated timestamp
updatedAt	Date	Auto-updated timestamp

4.2 Tasks Collection

Field Name	Type	Description
title	String	Name of the task
assigned	String	Employee assigned to task
dueDate	String	Deadline of the task

status	String	Task status (pending, in-progress, completed)
priority	String	Priority level (Low, Medium, High)

4.3 Leave Collection

Field Name	Type	Description
name	String	Name of employee
type	String	Type of leave (sick, casual, etc.)
fromdate	Date	Leave start date
todate	Date	Leave end date
description	String	Reason for leave
status	String	Approval status (Pending/Approved/Rejected)
createdAt	Date	Auto timestamp
updatedAt	Date	Auto timestamp

4.4 Document Collection

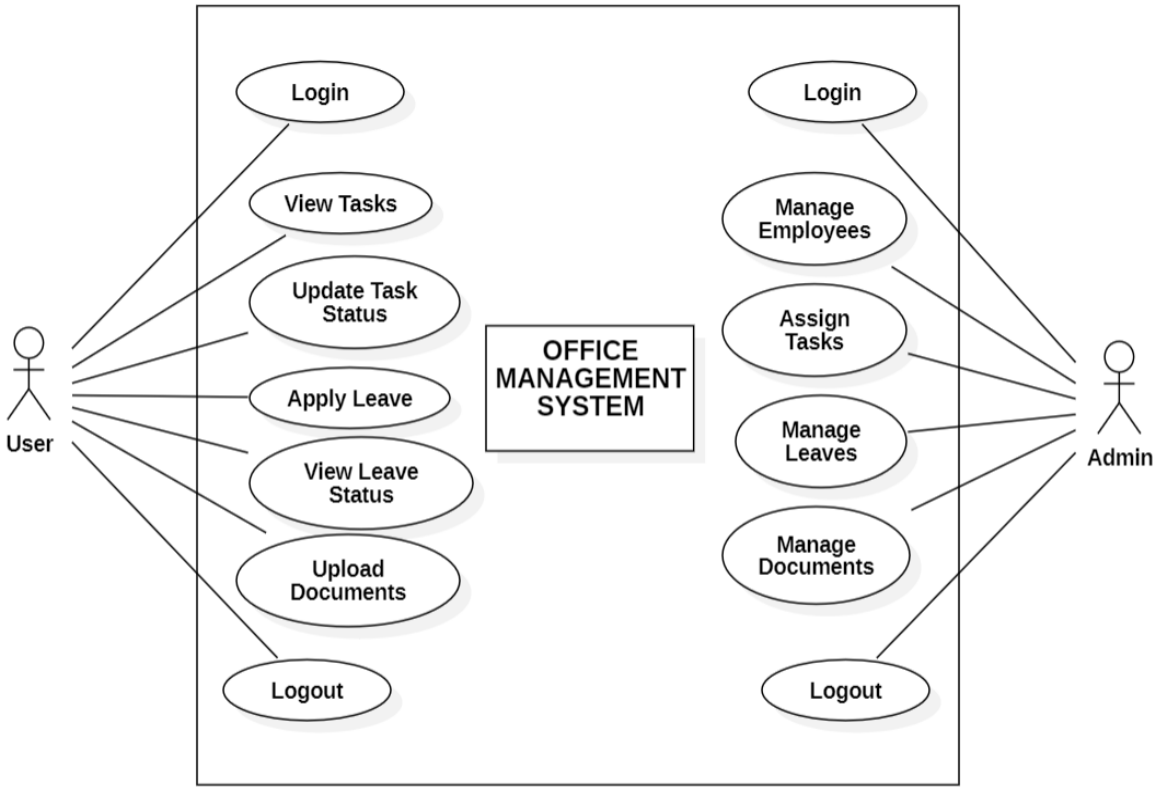
Field Name	Type	Description
name	String	Name of the document
type	String	Type of file (PDF, DOC, Image)
path	String	File storage path

date	String	Upload date
createdAt	Date	Auto timestamp
updatedAt	Date	Auto timestamp

5. UML DIAGRAM

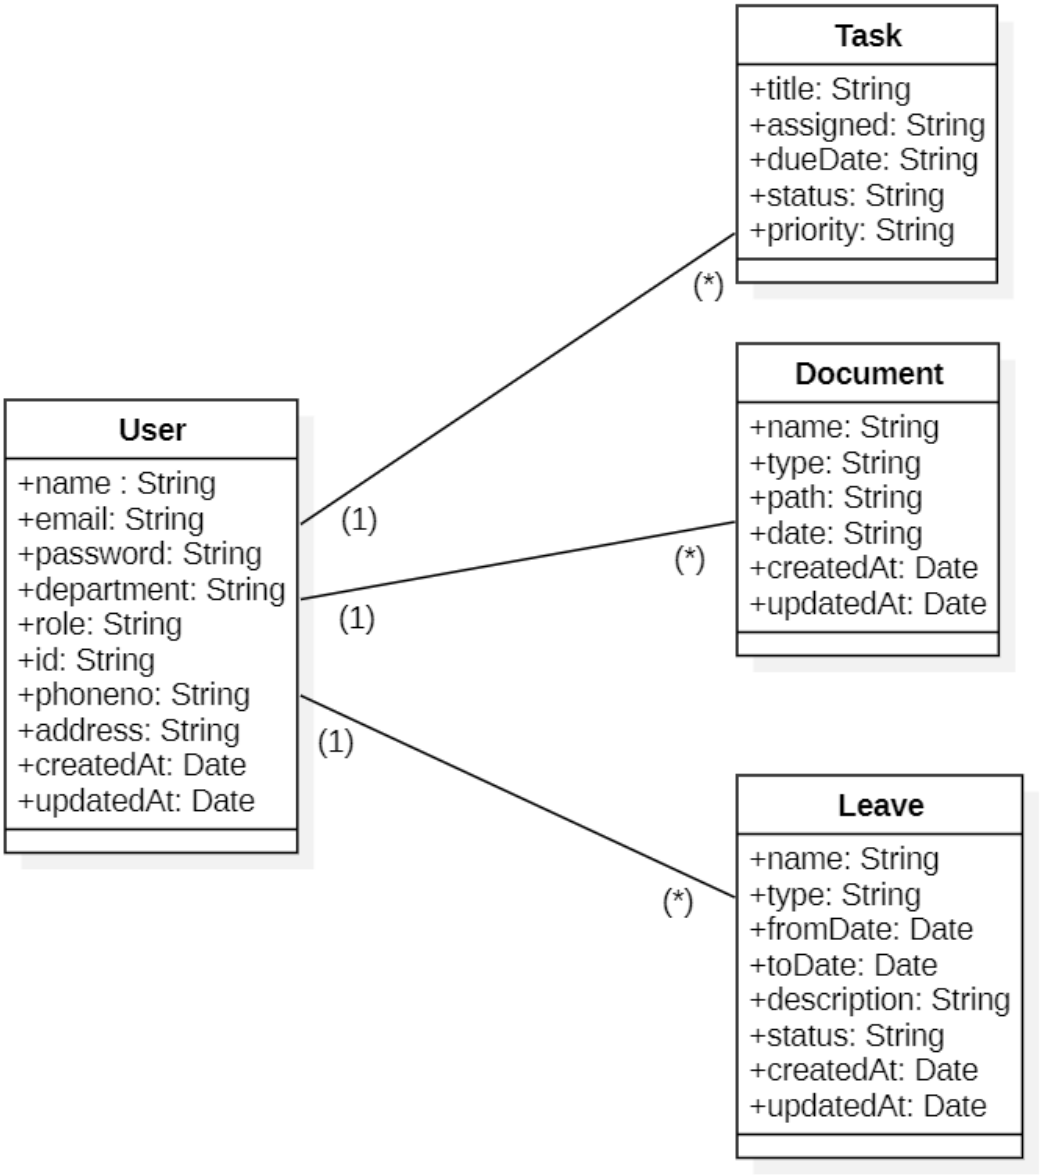
5.1. USE CASE DIAGRAM

The use case diagram shows the interaction between Admin and User with the system



5.2. CLASS DIAGRAM

The class diagram represents the structure of the system with classes and relationships.

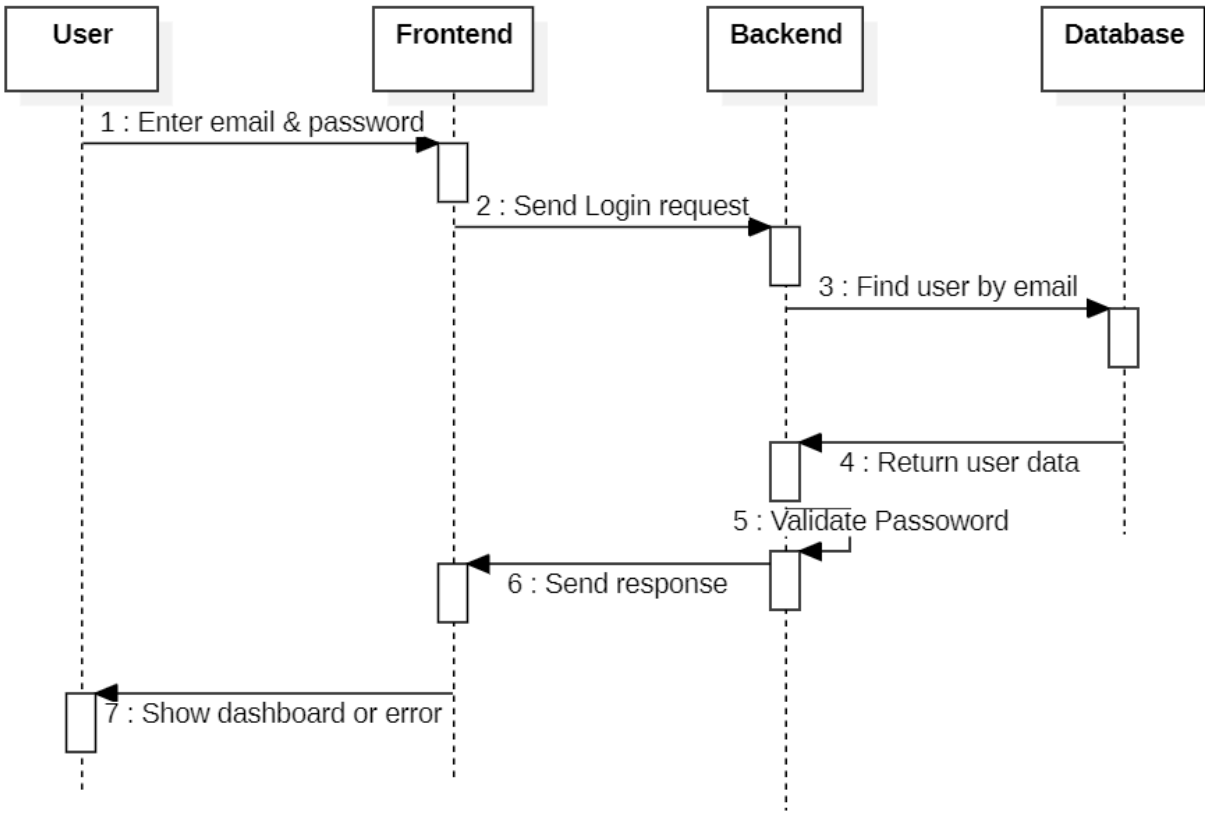


5.3. SEQUENCE DIAGRAM

It shows:

- **Step-by-step** flow of actions
- How system components interact over time

Login Sequence Diagram



6. MAJOR MODULE DEVELOPED

1. Dashboard Module (Admin & Employee)

The dashboard module provides an overview of the system. The admin dashboard displays overall statistics such as total employees, tasks, and attendance records. The employee dashboard shows assigned tasks, attendance status, and personal activity summary.

2. Employee Management Module

This module allows the admin to manage employee records. It includes functionalities such as adding, updating, viewing, and deleting employee details. It helps in maintaining organized employee data within the system.

3. Task Management Module

This module enables the admin to assign tasks to employees and track their progress. Employees can view assigned tasks and update their task status. It ensures efficient task allocation and monitoring.

4. Department Management Module

This module allows the admin to create and manage different departments within the organization. Employees can be assigned to specific departments, which helps in better organization and management.

5. Attendance Management Module

This module is used to track employee attendance. The admin can monitor attendance records, while employees can mark their attendance and view their attendance history. It helps in maintaining accurate attendance data.

7. ISSUE FACED AND PLAN FOR COMPLETION

Issue Faced

During the development of the Office Management System, several challenges were encountered while implementing different modules of the system. Some of the major issues faced are listed below:

◆ **Issues:**

- Difficulty in integrating frontend (React) with backend APIs (Node.js & Express)
- Errors while connecting and managing data in MongoDB database
- Handling user authentication and role-based access (Admin and Employee)
- Managing state and data flow in React components
- UI alignment and responsiveness issues
- Debugging errors in task and attendance modules

Plan for Completion

To complete the remaining part of the project, the following steps are planned:

◆ **Plan:**

- Improve user interface and overall design of the system
- Implement proper validation and error handling
- Complete testing of all modules
- Fix remaining bugs and optimize performance
- Final integration of all modules
- Prepare documentation and finalize the project for submission
